

1235GTX 1245GTX 1537GTX

TSG-9331

TSG-9341

TSG-9351

Turbine Stages	3	4	3
Pressure (PSI)	6	8	6
Output (CFM)	110	110	130
Turbine Speeds	Variable	Variable	Variable
Duty Rating (hrs/day)	4-6	4-6	6-8

All systems are supplied with a NB Spray Gun* and a 25' hose with Quick Connect Coupler
Model numbers shown are for 110V units. 220V are also available.

Optional Accessories:

- TSG-3018 0.8 mm SS Atomizing Kit
- TSG-3019 1.0 mm SS Atomizing Kit
- TSG-3020 1.5 mm SS Atomizing Kit
- TSG-3021 2.0 mm SS Atomizing Kit
- TSG-3022 2.5 mm SS Atomizing Kit
- TSG-4186 Remote 2 Qt. Cup with 5' fluid line
- TSG-3285 5' GT Flex Hose for improved gun mobility!
- TSG-3295 5' GT Heavy Duty Hose install at turbinaire outlet
- TSG-1389 Touch-up Cup Kit

*All NB guns are supplied with 1.5mm Atomizing Kit as standard

Remote Pressure Pots up to 20 GAL.
with air or manual agitator also available

Available from:

Turbine - Powered HVLV Spray Equipment
Professional Finishing Made Easy

- reduce overspray by up to 90%
- save up to 50% on coating costs
- superior quality finish with any sprayable coating
- cleaner, safer & healthier work environment
- portable - easy to use and maintain
- operates on 110V plug and spray

Lower cost and improve efficiency

Turbinaire HVLP Sprayers are powered by an electric turbine that supplies a consistent flow of high volume, low pressure air (4-6 PSI @ 95-130 CFM) to the spray gun to atomize the paint or coating being applied.

By spraying at low pressure, the coating doesn't bounce back from the surface such as with conventional high-pressure sprayers. As a result Turbinaire sprayers virtually eliminate overspray and drastically reduce coating consumption.

The end results are warm, clean, dry air at all times, substantial savings in coating and operating costs, a cleaner, safer work environment and a superior quality finish!

Ideal for Woodworkers, Hobbyists, Cabinet Shops, Contractors and more!

Ideal for spraying stain, shellac, lacquer, enamel, polyurethane, latex paint and more!

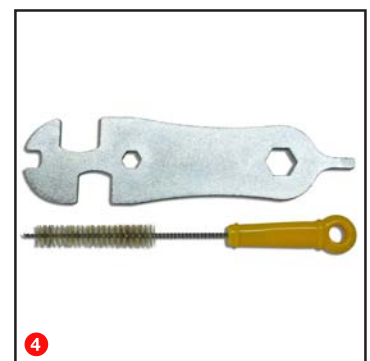

1 TSG-98045B - Cup Top Gasket

2 TSG-7300 - Foam Air Filters

3 TSG-1330 - Viscosity Cup

4 TSG-3035 - TOOL AND CLEANING BRUSH

Included with every system

Features for the expert... ease of use for the beginner.

- 1 Unique variable speed turbine**
The unique electronic speed controller provides the versatility to adjust the speed of the motor and control the air output of the turbine based on the coating being sprayed: reduce the air output to eliminate unnecessary overspray when spraying light-bodied coatings (stain, shellac, lacquer, sealer, etc.) and increase the air output for extra power when spraying heavy-bodied coatings (latex paint, enamel, multi-color, etc).
- 2 Dual Filtration for Atomizing Air and Motor Cooling Air**
Easily accessible high-density foam filters ensure maximum filtration without restricting airflow.
- 3 Power Indicator Light**
Power indicator light for maximum safety
- 4 Resetable Circuit Breaker**
Resetable breaker eliminates downtime from fuse replacement
- 5 Industrial Air Hose**
Lightweight, flexible air hose with quick connect coupler for gun

Non-Bleeder Spray Gun

- A** Quick and easy fan size adjustment at the turn of a knob
- B** Easily adjustable Air Cap for vertical, horizontal or round spray pattern
- C** Stainless steel Fluid Passages, Needle and Fluid Tip
- D** Non-Stick Cup for easy cleaning
- E** Pressurization tube with check valve to ensure material doesn't back-up into air passages
- F** Cool Grip Handle and lightweight durable gun body
